HAS SOME EXCITING NEWS REGARDING THE TRUSTED EL900 RANGE.

The EL900, currently available in separate 12V and 24VDC versions, will be replaced by a new “one-fits-all” model that is fully interchangeable. The only selectable option will be whether a monitored version is required.

Supplied pre-set to PTL (fail-safe), the EL900 can still be easily converted to PTO (fail secure) by adjusting the screw position. The product will continue to include the 25 mm extension lip, along with both long and short faceplates, to suit different installation requirements.

What does this mean for you?

No size or fit changes. The new version is the same shape and size no mechanical or installation changes needed.

Only the wiring has changed.

- Non-monitored version: now includes red, blue, black, and white wires for 12V or 24VDC connection (instead of two red wires).
- Monitored version: includes the new power wires plus the existing blue, green, and yellow monitoring wires.
